

The Small Habitat Restoration Program enhances streams and wetlands for community, fish and wildlife.

2020 was a challenging year for everyone! Despite an international pandemic and being remoted from our offices, SHRP staff and Washington Conservation Corps crews implemented 23 projects including 19 projects that were maintained and 4 new construction projects.

Since 1995 SHRP has implemented over 658 projects, planted over 265,000 trees and restored more than 15 miles of riparian habitat on public and private land. SHRP projects are performed for mutual benefit with voluntary property owner participation, no land acquisition costs, and no costs to property owners.

2020 ACCOMPLISHMENTS

In 2020 the SHRP Team and the Washington Conservation Corps, working under COVID safety guidelines, worked on **22 total projects**.
